Ideate Phase – Ideation Workshop Sheet

Team Information

Team Name:	**Student 1(Roll No and Name)**	**Student 2(Roll No and Name)**
Eataly	241701003 Aishwarya B	241701024 Latha A

Problem Statement:

The current campus canteen ordering process is inefficient due to long queues, network issues, manual order Management, and the inability to predict food demand accurately. Students spend excessive time waiting to place and Collect orders, while cafe administrators struggle to manage peak-hour rush, monitor inventory, and estimate food Quantities. This results in delays, overcrowding, food wastage, and reduced overall dining efficiency.

Target Users:

Students and admin managers around college campus.

Brainstorming Rules

1. Focus on generating many ideas.
2. Do not criticize any idea during brainstorming.
3. Encourage creative and unusual ideas.
4. Build on ideas proposed by teammates.
5. Write or sketch ideas

Idea Generation (Brainstorming)

Idea No	Student 1 Idea	Student 2 Idea
1	Separate fast-track kiosk counter only for small, quick orders like snacks and beverages.	Weekly food demand pattern shown to canteen staff so they know how much to prepare.
2	Mobile app where students pre-order meals and pick a fixed time slot to collect food.	Notify students on their phone when their order is ready for pickup.
3	Simple counter display board showing which food items are sold out in real time.	Number-token machine at the canteen entrance so students know their turn without standing in line.
4	Single app connecting all campus canteens, so admins see total orders and demand in one place.	Admin dashboard that shows order volume and stock levels for every canteen on campus.
5	One app for pre-ordering food, choosing a pickup time, and checking live food stock before ordering.	Same app idea, but with separate logins for students, staff, and canteen admins.

Top Idea Selected

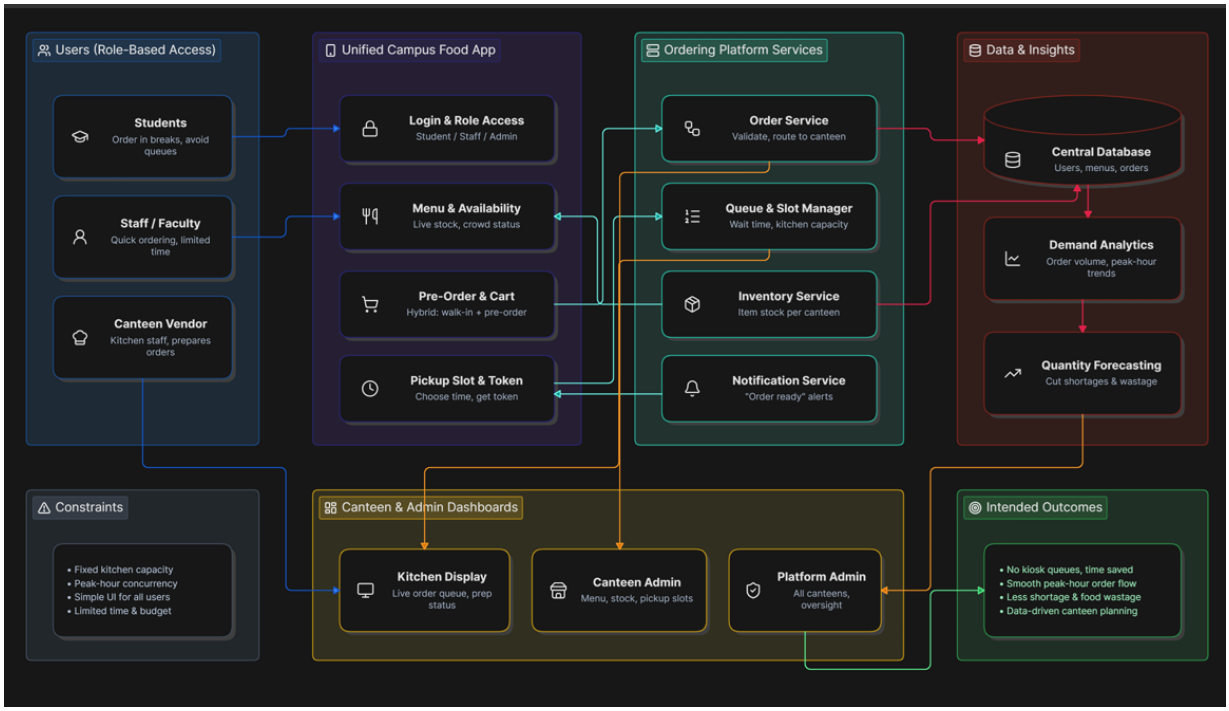

Selected Idea: Campus Food Ordering App – lets students pre-order food, pick a pickup time, and gives admins live demand data.

Concept Development

Feature	Description
Project Title	Eataly IN-CAMPUS FOOD ORDERING SYSTEM
Key Features	• Food availability checking • Pickup time • Admin side demand high-> inform them • Time selection to pickup food • Fixing food distribution counters (different food ordered at different canteen) is gathered at different stations (highly common spots in college) • Waiting time estimated – user side • Expected ordering- admin side
Technology Required	• Android Studio • Firebase
Expected Benefits	• Students can pre-order meals, reducing, waiting time and avoiding long queues.

	• A faster and more reliable ordering and payment process improves the overall dining experience. • Better scheduling allows students to save time between classes. • Cafe administrators can accurately forecast demand using pre-order data. • Automated order and inventory management reduce workload and improve operational efficiency. • Optimized food preparation minimizes wastage, enhances service quality, and increases customer satisfaction.

Solution Architecture Diagram

Short Idea Pitch

Problem Addressed:

Long queues at canteen kiosks, no way to check food stock remotely, no pre-order option, and no data for admins to plan food quantity.

Proposed Solution:

Design a campus food ordering app that allows students and staff to pre-order food, select a convenient pickup Time, and avoid long kiosk queues while helping canteen admins efficiently manage food quantity, orders, and Demand across multiple canteens on campus.

Key Benefit to Users:

Students and staff save time by skipping queues and collecting food when it's ready. Canteen admins get clear demand data, so there is less shortage and less food wastage
